# *Fibroblast Plasma Skin Tightening*

## **WHAT IT IS**

Fibroblast Plasma Skin Tightening is the only treatment to use plasma to eliminate excess skin. The plasma device creates a tiny plasma flash when met with the body's natural gas, Co2. This superficial point target's the skin and its immediate vicinity creating a controlled barrier. This produces the volume of the skin pulling the cells together and tightening the target area. A series of carbon deposits are strategically placed to attain the desired result for the reduction of excess skin.

## **HOW LONG DOES IT LAST**

When performing plasma pen skin tightening, the skin is actually removed so effect should last as long as invasive surgery which is typically 3-5 years.
